Antenova

Denford equipment boosts prototyping facilities

Antenova is a leading developer and supplier of high performance antennas and RF antenna modules for mobile handsets, portable devices and laptop computers.

"We initially contacted Denford to see how we could improve on our existing prototyping facilities.

We have been extremely impressed with the speed and versatility of the machines, not to mention the service and support we have received.

Having realised the benefits of using a small desktop milling machine for rapid prototyping, we have since upgraded the first machine and invested in another, with more to come. Throughout this process, Denford have been quick to respond to our needs and have given us some very effective solutions.

Our customers are constantly impressed by the quality and speed of the prototyping work done on the Denford machines.

With the wireless market growing at such a rate, its nice to be able to rely on the team at Denfords to support us along the way."

Antenova used our Triton milling machine for their rapid prototyping facilities.

This machine has now been replaced by the new and even better VMC 1300
