

Innovative Technology - Testimonial

Last Updated Friday, 20 April 2007

Innovative Technology has become Europe's largest manufacturer of bank note validators, and has earned a reputation as one of the leading suppliers around the world. In response to their increased demand to turn round new products quickly, their development team rely on Denford machines as a major part in manufacturing their prototype models.

These models are complex mechanical devices comprising of many moving parts, including gears and cams, all of which need to be accurately manufactured to work together in order to achieve the demanding performance of a banknote validator when put through their rigorous testing procedures.

Innovative Technology were so impressed with their Denford Triton machine, they have now bought a second machine.

Machines: 2 x Triton Pro (servo)
Software: VR Milling V5; QuickCAM Pro

The components being made on the Denford machines are extremely impressive:
