

DENFORD'S NEW MRC 40

Last Updated Monday, 24 May 2010

Affordable, Versatile Router, Miller & Engraver !

Denford Limited have just launched the new MRC 40 Machine and believe it will be hard to find a better-specified, more versatile machine at the price!

The new MRC 40 is a high-spec / low-cost solution for all your routing, milling and engraving needs. It has a powerful 500W spindle motor and offers high speed manufacture linked with a large working envelope. This versatile machine handles small engraving jobs; and the large working envelope and Z axis capability (110mm) is perfect for the manufacture of large 3D designs. Set-up and tool changes are a simple process, and the MRC 40 is available with a host of optional extras for specialist applications.

The MRC40 is available with everything you need to get you up and running immediately. In addition, there is a full range of optional items, including a "Resources Pack," which incorporates a package of mixed tools (2D, 3D & engraving tooling and collets), plus a variety of consumable materials such as 'protofoam' and cast acrylic billets. The MRC 40 is also ideal for the F1 in Schools challenge, when purchasing the optional F1 in Schools Car Manufacturing Fixture and Aluminium T-Slot Table.

This latest new product follows on from Denford's PCB Engraving machine, which has proved so popular with schools working with limited budgets
